

Medizone™ - Area Service Module

Key Features

1. Superior aesthetics
2. Supplied factory pre-piped and pre-wired
3. High quality panel fascias
4. Incorporating ZSU² valves
5. Aluminium, ABS and compact laminate 2nd fix design
6. Surprisingly lightweight
7. 1-6 gas services or 1-5 gas services and local alarm panel
8. Pre-wired and configured local alarm panel
9. Double pole tamper-proof fused spur option
10. Bespoke configuration

Benefits

- Choose from 5 colours to enhance the patient environment
- Ensured quality and speed of installation on site
- Easy to clean with no panel gaps provides a seamless finish
- Including an intuitive method of reliable and safe emergency access
- Corrosion proof enclosure providing inherent corrosion resistance
- Owing to careful selection of materials
- Suitable for accommodating a high number of valves for areas such as Operating Theatres and ICU/CCU
- Set up with pressure switches mounted within a high level access panel or inside the ZSU² valve provides ease of installation
- For isolating local alarm panel during maintenance - as required by IEE wiring regulations
- Manufactured to suit the site specific ceiling height, to ensure optimised positioning of the valves and alarm panel

is in the
details.*

A Superior Mounting Solution

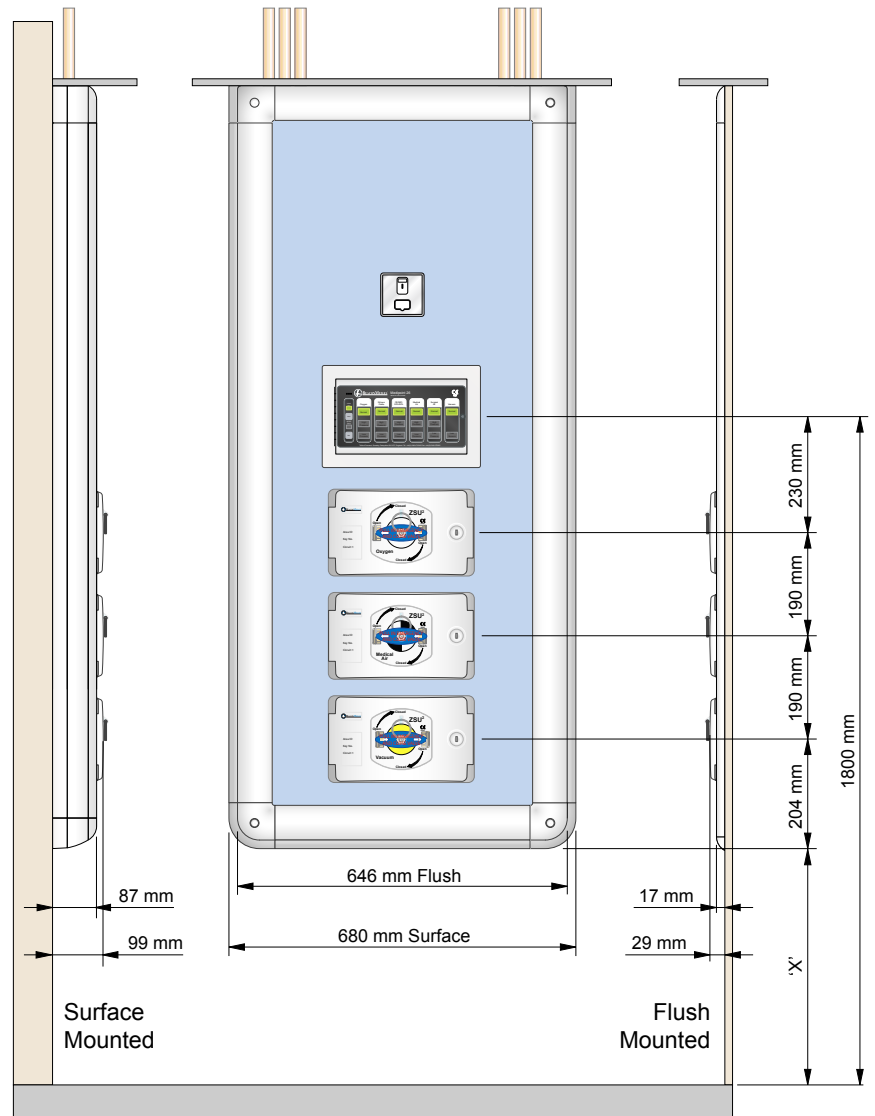

The BeaconMedæS Medizone™ Area Service Module blends seamlessly into the modern hospital environment. The tastefully sculptured profile is complimented by a range of colour options and the fresh aesthetics of the BeaconMedæS ZSU² - zone service unit.

The Medizone™ is designed for rapid installation and can be surface mounted on a finished wall or flush fitted into a stud wall. Since all piping, wiring and pressure testing is completed prior to delivery, factory controlled quality is assured. The Medizone™ is surprisingly lightweight, owing to a high pressure compact laminate fascia plate and extruded aluminium frame construction.

Medizones can accommodate from 1 to 6 gas services, or 1 to 5 gas services and local alarm panel, using 22mm area valve service units, with the option of 28mm gas assemblies for high oxygen and vacuum flows. The ZSU² area valve service unit includes an intuitive method of reliable and safe emergency access. A firm tug on the ring pull breaks the front portion of the window free, providing instant unhindered access.

Colour Options

A range of 5 standard colours is available. Colours printed here are for indication only as limitations in the printing process do not allow an exact representation.

Dimension 'X'		
No. of ZSU ² 's	Surface	Flush
1	986 mm	1003 mm
2	986 mm	1003 mm
3	986 mm	1003 mm
4	796 mm	813 mm
5	606 mm	623 mm
6	416 mm	433 mm
